

# FRUBO Product Description

## Semi Matt Microporous 190g/m<sup>2</sup>

This Instant Dry photographic quality inkjet paper is the perfect medium for today's visual message. Designed to offer high performance on both thermal and piezo printers, this inkjet paper can be used at high print speeds. It accepts both aqueous dye and pigment inks and is touch-dry immediately after printing. Suitable for printing photographic images, exhibition panels and other graphics on various different printer types with rapid dry times, FRUBO's SEMI MATT MICROPOROUS can save time and material.

### *Best for*

- Photorealistic images
- Exhibition panels and other graphics

### The coating makes the difference...

FRUBO's SEMI MATT MICROPOROUS inkjet paper is made from the same base resin coated (RC) used in professional photographic paper. This media has an instant dry porous ink receiving layer which means that the ink is absorbed into the coating almost immediately, not allowing it to spread or mix with other ink dots and the print feels dry to the touch straight from the printer. As a consequence, FRUBO presents:

- Instant dry prints in real photo quality
- Outstanding image quality
- Excellent productivity

### Technical Data:

Weight 190 g/m<sup>2</sup>

Thickness 210 Micron

Opacity >98%

Whiteness (Lab) 95

Gloss (20°) >22%

Storage Conditions 10-21°C (10-80% RH, non-condensing)
